INTRODUCTION

It is no mystery why so many musicians have turned to country music in recent years. After all, no other popular music style offers the rich heritage and diversity of American country music. Good country bands are in demand not only in the United States but in every corner of the free world. And every country musician knows that the loyalty of country fans is unbeatable.

Because country music encompasses many substyles, it offers the guitarist a unique and immensely satisfying challenge. Fortunately, the guitar is a chameleon instrument that can speak in many colors. For example, our country fiddling tradition has been well absorbed by guitarists such as Doc Watson and Norman Blake. The simple Hawaiian steel guitar, in the hands of talented country musicians, has evolved in just a short time into an instrument capable of enormous emotional expression. Name the style, and it has probably been mixed into the diverse brew of sounds that make up today's country music. Jazz and blues, acoustic and electric, the modern Nashville session wizard can play it all, and with great taste and skill.

A good country lead guitarist can really help a band come alive. This book presents an exciting variety of 101 country guitar licks that can be used to great effect in real-life performing situations. Learn these licks and you may be the one who makes the band sparkle.

Larry McCabe

Tallahassee, Florida

HOW TO USE THIS BOOK

APPLICATION

This book features a compilation of 101 country licks for the guitar. Recorded with an electric guitar, most of the licks are also playable on an acoustic guitar with light-gauge strings and an unwound G. Many of the licks can be played on other treble clef instruments.

Each lick is presented in both standard notation and tablature, with each example written in the key of C for the sake of uniformity and ease of comparison. To encourage “woodshedding” over standard harmonic progressions, the musical examples are organized according to chord changes. Because the examples are not arranged in order of difficulty, the student may learn the examples in any sequence according to his or her playing expertise. Many of the licks are well within the range of the beginner. Experienced guitarists will find this book to be an invaluable reference that is overflowing with ideas for live performance.

The guitar licks in this collection can be applied to an unlimited variety of popular country songs from all eras including acoustic, honkytonk, and contemporary Nashville. In addition, the licks are a perfect match for the country-flavored pop stylings of artists like the Eagles, Bob Dylan, Jackson Browne, and similar musicians.

The split-track stereo companion recording, available as an option, is highly recommended. For the sake of convenience, the guitar licks are isolated on one track while the accompanying country piano is isolated on the other track. In my own teaching, I have found companion recordings to be a great help in accelerating the learning process.

WILDWOOD FLOWER

The following arrangement of “Wildwood Flower,” played as an instrumental at the beginning of the optional companion recording, shows how to use examples from the book in an actual song setting.

The musical score is written for three parts: Melody, Lead guitar, and Bass/Tenor. The key signature is C major, and the time signature is 4/4. The introduction (number 88) consists of four measures. The first two measures of the melody are whole notes, and the last two are quarter notes. The lead guitar part features a continuous eighth-note pattern. The bass line is a simple eighth-note accompaniment. The first fill-in (number 26) occurs between measures 6 and 7, featuring a 'Pick and release' and 'Hold bend' instruction. The second fill-in (number 1) occurs between measures 7 and 8, also featuring a 'Pick and release' and 'Hold bend' instruction. The third fill-in (number 33) occurs between measures 10 and 11, featuring a 'Pick and release' and 'Hold bend' instruction. The score concludes with a final measure in measure 12.

VARIATIONS

There are many ways to vary the guitar licks presented in this text. The following musical examples, each based on lick #24, will give you some ideas for creating your own variations.

Melodic variation resolving to a tone of the accompanying chord

The following example shows how the final note in the lick could be changed from A to F. There are two reasons why this variation works: (a) The F note is a tone in the F chord (FAC), and is therefore “in tune” with the chord; and (b) the F note sounds as good or better than the original melody note.

Melodic variation on #24

The musical notation shows a guitar lick in 3/4 time. The first measure is labeled 'C' and contains a quarter rest followed by a triplet of eighth notes: G4, A4, and B4. The second measure is labeled 'F' and contains a dotted half note F4. Below the staff, the fretting hand positions are indicated: the first measure has frets 3, 3, and 2 for the triplet notes, and the second measure has fret 1 for the F note.

Harmonic variation using a new chord in place of an original chord

The final note in lick #24 is an A note which occurs on the first beat of the F chord measure. The next example shows how the lick may also be used in a C chord to A minor (ACE) chord change.

Harmonic variation on #24

The musical notation shows a guitar lick in 3/4 time. The first measure is labeled 'C' and contains a quarter rest followed by a triplet of eighth notes: G4, A4, and B4. The second measure is labeled 'Am' and contains a dotted half note A4. Below the staff, the fretting hand positions are indicated: the first measure has frets 3, 3, and 2 for the triplet notes, and the second measure has fret 5 for the A note.

Why A minor? Because the A note is a tone in the A minor chord! Of course, the minor chord is only one of many chords that contain the A note. Can you think of any other chords that contain an A note that could be played in the second measure of this example? Remember, the ear is the final judge!

Rhythmic variations

You can usually create interesting rhythmic variations on any lick by changing the timing of one or more notes. Compare the note values in the following example to the original note values in lick #24.

Rhythmic variation on #24

The image shows a musical score for a guitar lick. The top staff is in treble clef with a 3/4 time signature. It contains two measures. The first measure is labeled 'C' and contains a half note on the second line (D4) with a '2' below it, and a quarter note on the second space (E4). The second measure is labeled 'F' and contains a quarter note on the second space (E4) and a dotted half note on the second line (D4). The bottom staff is a bass line with fret numbers. It is labeled 'T' (thumb), 'A' (index), and 'B' (middle) on the left. The fret numbers are 3, 3, 2, and 5, corresponding to the four beats of the two measures.

Most cut-time licks can also be played in 4/4 time, and some 4/4 licks can also be played in cut time. While there is no exact distinction between cut time and 4/4, cut time is generally applied to music that is played too quickly to conveniently tap out four beats to the measure. On the other hand, 4/4 time is often characterized by “walking” (four-to-the-bar) bass lines.

THE NASHVILLE NUMBER SYSTEM

The *Nashville number system* is a chord-numbering system that helps musicians in the following ways:

1. The number system helps musicians understand how a given chord (or a progression of chords) functions in a given key.
2. The number system makes it easier to transpose any chord progression to another key.
3. The number system helps musicians hear and identify universal relationships that exist between chords.
4. The number system enhances effective communication among musicians.

We can easily learn the Nashville number system by applying it to the *main chords* in the key of C major: C, F, and G7. In the key of C, the C chord will be identified as I because its root tone is the *first* tone in the corresponding C major scale. Similarly, the F chord will be identified as IV because its root is the *fourth* note in the C scale. That brings us to the G7 chord. The identification for G7 will require two characters, one for the position of the chord root (G) in the C scale (V), and one for the chord *type* (7); thus, the G7 chord is the V7 chord in the key of C.

It is important to realize that the *function* of a given chord (I, IV, V7, etc.) is determined by the key of the moment; for example, the C chord is I in the key of C, IV in the key of G, V in the key of F, $\flat$ VII in the key of D, II in the key of $B\flat$, and so on.

The following example shows a basic twelve-bar blues progression written in the Nashville number system. Play the example in the key of C, then try to transpose it to several other keys. (If you need help, see a music teacher for a lesson on scales!)

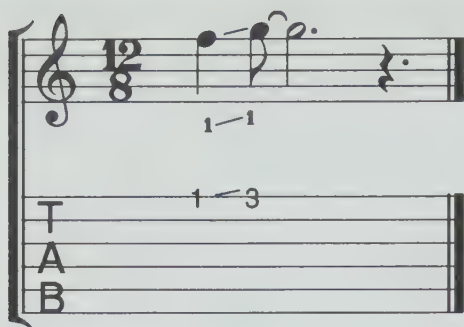

I7	I7	I7	I7
/ / / /	/ / / /	/ / / /	/ / / /
IV7	IV7	I7	I7
/ / / /	/ / / /	/ / / /	/ / / /
V7	V7	I7	I7
/ / / /	/ / / /	/ / / /	/ / / /

CREATIVE PROJECTS FOR THE MUSIC STUDENT

The following projects and activities will help you learn to apply the guitar licks in this book to popular country recordings and live performance situations.

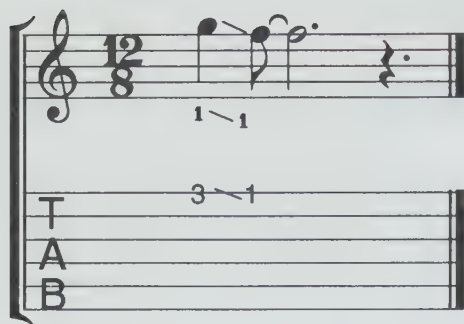

1. A tape recorder with pitch control will enable you to play each turnaround lick in several keys.
2. Think of each lick in universal rather than key-specific terms. For example, each C to F lick may be thought of as: 1) a I to IV lick; 2) a lick which connects two major chords whose root tones are a perfect fourth apart.
3. Use Roman numerals to identify the chord changes to several of your favorite songs.
4. Transpose each lick in this book to one or more new keys. For best results, write out the music on staff paper.
5. Apply what you have learned by playing some of your favorite licks from this book along with your favorite CW recordings.
6. After you gain some experience playing the licks in this book, try to transcribe some licks from some of your favorite CW recordings. A two-speed recorder with pitch control will help you a lot here.
7. Compose several original country licks each week. Transpose each lick to all twelve keys. For maximum efficiency, always play your melodic ideas over taped chord changes.
8. Immerse yourself in country music activities. Suggested activities:
 - a. Check out country music books and recordings at your local library.
 - b. Listen to country music from all eras, not only the contemporary commercial material.
 - c. Attend as many country concerts as possible. Study the players.
 - d. Listen to steel guitarists and fiddlers; many of their ideas have made their way into the country guitar vocabulary.

GUIDE TO SYMBOLS AND NOTATION

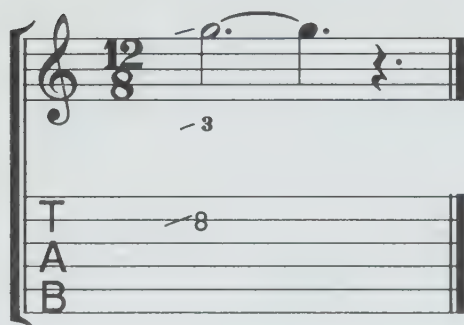

SLIDE UP

1. Fret, then pick the note that precedes the *slide up* symbol.
2. Without releasing finger pressure, “slide” (move) the fretting finger up the fingerboard to sound the next note.
3. Pick only the note that precedes the slide.

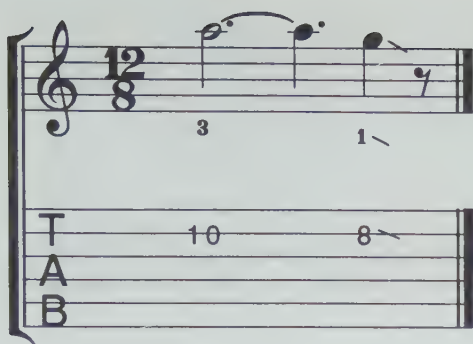

SLIDE DOWN

1. Fret, then pick the note that precedes the *slide down* symbol.
2. Without releasing finger pressure, “slide” (move) the fretting finger down the fingerboard to sound the next note.
3. Pick only the note that precedes the slide.

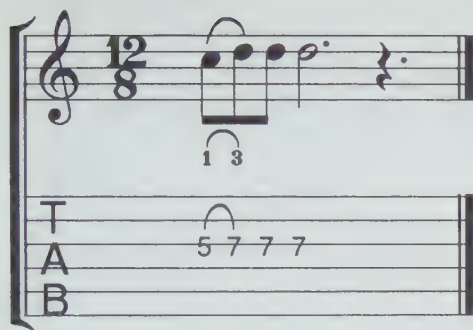

SLIDE UP FROM NO SPECIFIC PITCH

1. This slide does not have a specific “point of departure” - only a “destination.”
2. Fret a note “somewhere” on the same string as the written note that follows the *slide up* symbol. The first note must be lower in pitch than the note that follows the *slide up* symbol.
3. Pick the fretted note, then, without releasing finger pressure, “slide” the finger up the fingerboard to sound the written note.
4. Pick only the first note. The second note will be sounded by the slide itself.

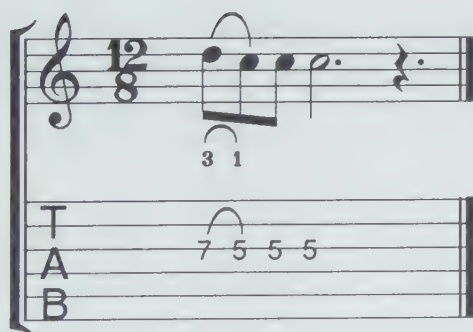

FALL - OFF

1. Here, we have a specific “point of departure,” but no specific “destination.”
2. Fret, then pick the note that precedes the *slide down* symbol.
3. After picking the note, keep finger pressure on the string while moving the fretting finger down the string (towards the lower-pitched notes) several frets.
4. Allow the sound of the slide to die out after sliding down several frets.

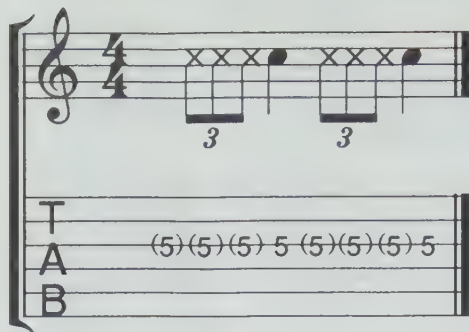

HAMMER-ON

1. The *hammer-on* is indicated by a curved line connecting a note to a higher-pitched note.
2. Fret, then pick the note that appears at the left of the curved line.
3. Without picking again, “slam” (hammer) the indicated fretting finger down to sound the note that appears at the right of the curved line.

PULL-OFF

1. The *pull-off* is indicated by a curved line connecting a note to a lower-pitched note.
2. Fret the note that appears at the left of the curved line. At the same time, fret the note that appears at the right of the curved line.
3. Only after fretting both notes, pick the first note.
4. After picking the first note, *pull* the fretting finger away (release contact) from the note in a way which causes the next note to sound without picking again.
The *pull-off* is best achieved by “snapping” the finger away from the string with a sideways motion, rather than merely lifting the fretting finger from the note.

GHOST NOTES/CHICKEN PICKING

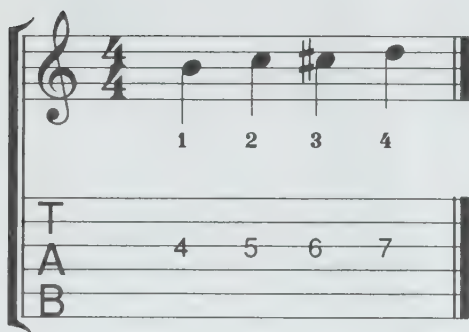

A ghost note is indicated by an **x** which takes the place of the notehead in the music notation. In the tablature, the ghost note is enclosed in parenthesis.

A ghost note has a soft, muffled sound which is produced by fingering the note lightly and picking with a soft touch. The result is a note that is barely audible. When playing a ghost note, it is helpful to mute the picked string by touching it with the side of the picking hand. The great jazz trumpeter Dizzie Gillespie was a master of the ghost note technique.

Country guitarists seem to be fond of playing muted notes with an accented, staccato attack known as “chicken picking.” This technique produces a “scratchy-sounding” note that is muted like a true grace note, but played with more volume.

The “chicken picking” effect can be enhanced by touching the picked string with the flesh of the picking-hand thumb (or index finger) at the moment the note is being picked. Added amp volume will also help to bring out the country “chicken picking” guitar sound.

SEE # 80 and # 91.

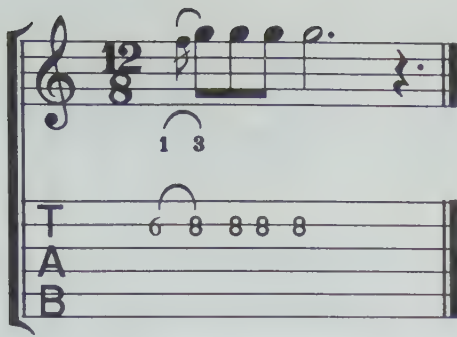

FINGERINGS

Suggested fingerings are supplied to help the guitarist find the best playing position for each musical example.

Fingerings are shown with the numbers 1-4:

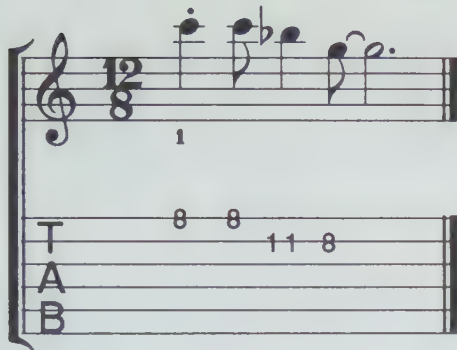

- 1 = Index finger
- 2 = Middle finger
- 3 = Ring finger
- 4 = Little finger

GRACE NOTES

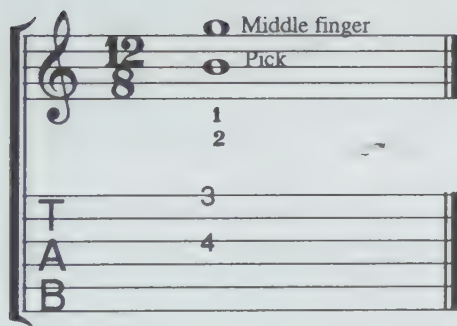

Used for embellishment and expression, a *grace note* is played so rapidly that it takes up no time in the music.

The note which follows a grace note is usually sounded by sliding, hammering-on, or pulling-off.

STACCATO NOTES

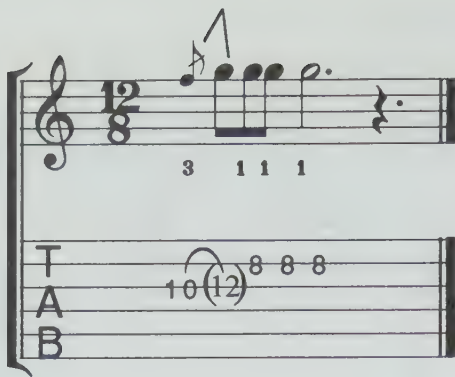

A *staccato* note is carried for about half of its written time value. Clearly detached from the note that follows (if any), a staccato note is often played with a sharply punctuated attack. To produce a staccato sound on the guitar, release finger pressure after picking the note, but maintain finger contact with the string.

PINCHED NOTES

When two notes are played at the same time on non-adjacent strings, it is best to sound the notes by *pinching*. To pinch the notes, play the upper voice (the higher-sounding note) with an upward motion of the middle fingernail while playing the lower voice with a downward motion of the pick.

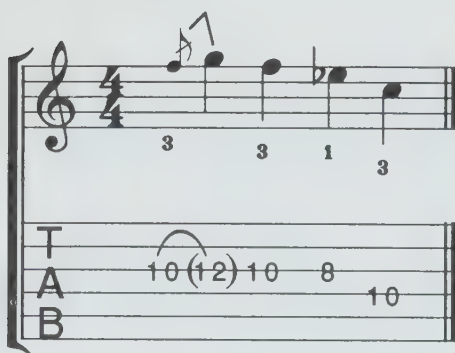

The “pinch” technique may also be used for doublestops (two notes) on neighbor strings. SEE: #15, #18, #35, #42, #44, #49, #50, #65, #75, #83, #84, #92, #94.

GRACE NOTE STRING BEND

The parenthesized note in the tablature shows the pitch of the bent note, and also helps to distinguish the bend from a hammer-on.

Some string bends require notation that is different than the notation used for the grace note bend. The following examples describe these *special types of bends*.

BEND UP - SILENT RELEASE

STRING BENDING/THE GRACE NOTE BEND

String bending is also known as “pushing,” “stretching,” or “pulling.” The most basic type of bend is the *grace note bend*. The grace note bend is executed as follows:

1. Fret, then pick the note to be bent.
2. Then, rapidly bend the string sideways up to the desired pitch.

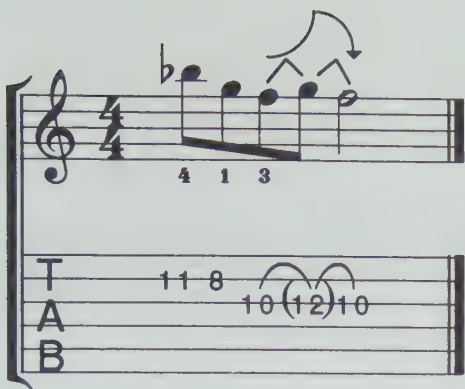

Different players use different methods to execute string bends. I recommend *pushing* bends on the four top strings towards the bass strings, and *pulling* bends on the two low strings towards the treble strings.

BEND UP - SILENT RELEASE

1. Fret the F note with the third finger on the tenth fret of the third string.
2. Pick the F note, then bend up to sound like G according to the rhythmic value of the music.
3. After the G note sounds, silently release the bend before picking the F note which precedes E $\flat$. Muting the string with the side of your picking hand will help here.

SEE #71.

The parenthesized note in the tablature shows the pitch of the bent note, and also distinguishes the bend from a hammer-on.

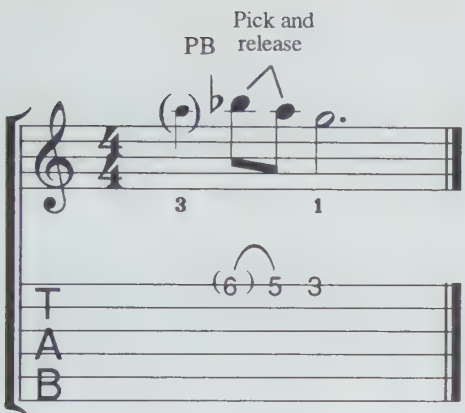

BEND UP - RELEASE BEND

BEND UP - RELEASE BEND

1. After playing the first two notes, fret the F note with the third finger at the tenth fret of the third string.
2. Bend the F note up to sound like G according to the rhythmic value of the music.
3. Without picking again, release the bend back to stationary position. This will sound the F note which follows G.

SEE: #79.

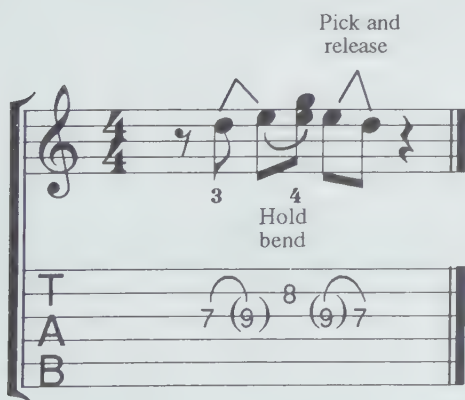

PREBEND-PICK-RELEASE

PREBEND - PICK - RELEASE

1. Fret the A note at the fifth fret of the first string with the third finger.
2. Without picking the string, *prebend* the string up to the pitch of Bb. (Of course, the first several times you do this you will need to test the sound of the bend to be sure that it is in the right place.)
3. Pick the prebent string to sound the Bb note; then, without picking again, release the bend to sound the A note according to the rhythmic value of the music.

SEE: #12, #14, #30, #46, #72, #84, #86.

Important: "Release the bend" does not mean to let go of the string in a manner that stops the sound. Rather, it indicates that the bending finger should be moved back to its usual position ("stationary position") while the note (or notes) continues to sustain.

HOLD BEND-PICK-RELEASE

HOLD BEND - PICK - RELEASE

1. Fret the D note with the third finger at the seventh fret of the third string.
2. Pick the third string, then bend the D note up to sound like E according to the rhythmic value of the music.
3. Holding the bent string at the E pitch, play the G note on the second string.
4. After the G note has been played, pick the bent note (E), then release the bend to sound the D note. At this point, your fretting finger will be back in stationary position at the seventh fret of the third string.

SEE: #1, #8, #22, #26, #29, #40, #46, #67.

Notes

1. Many C to F licks will also fit C7 to F.
2. For best results, experiment with a variety of chord resolutions. For example, number 24 (above) will work with both C to A minor and C to A diminished. In fact, the lick could theoretically resolve to any chord containing an A note.
